

ShivaPrasad Gadapa

DevSecOps & Cloud Consultant @ JaguarLandRover (JLR)

CONTACT INFORMATION:

📞 9491883253
✉ shiva.gadapa1990@gmail.com
🌐 linkedin.com/in/shivaprasadgadapa

Core SKILLS:

Programming

Java(Spring Boot), C++

Scripting

Python, Bash Scripting

CI/CD & Version Control:

GitLab CI, Jenkins CI

InfraStructure as Code (Iac):

TerraForm, Ansible

Security Tools:

SAST(SonarQube & Synk),
DAST(OWASP ZAP), SCA(Trivy),
IaC(Synk)

Container Orchestration:

Kubernetes (K8S), Docker, EKS

Cloud Platform:

AWS (EC2, S3, EKS, VPC)

Monitoring & Observability:

Grafana, Prometheus

Project Management:

JIRA, Confluence

Operating System:

Linux(Ubuntu, RedHat), Windows

Debugging Tools:

GDB, WinDBG, PyCharm

IDE:

VisualStudio Code

PROFESSIONAL SUMMARY:

Results-driven **DevSecOps Engineer with 10+ years of experience** in designing, implementing, and securing CI/CD pipelines, cloud infrastructure, and containerized applications. experience in integrating security practices into DevOps workflows automating compliance and managing scalable cloud environments

WORK EXPERIENCE:

DevSecOps Consultant @ JLR

Jan 2022 - Present

- Architected and implemented robust CI/CD pipelines using GitLab, increasing release frequency by (30%) while decreasing build and deployment times from hours to minutes by decoupling pipelines, utilizing cross-repo webhook triggers, and implementing change-detection filters
- Implemented and Managed AWS cloud resources in S3, VPC (Subnet, Private Subnet, Nat Gateway) EC2 Instance creation using terraform and ArgoCD
- Spearheaded a DevSecOps transition by integrating security scanning (SAST, DAST, IaC & SCA) into the CI/CD lifecycle, cutting vulnerability remediation time by (40%)
- Engineered automated canary deployment and blue-green rollout pipelines utilizing Istio Service mesh, Sprint-boot microservices & GitOps frameworks, reducing production deployment failure rates from 12% to under 5%
- Implemented Istio's Zero-Trust network infrastructure by enforcing cluster-wide Strict mTLS and authorization policies to secure sensitive API's and Access to core services
- Acted as the point of contact for Product owners, stakeholders and cross functional teams for components integration, Infra related issues, and Code reviews

SDE - II @ NCR Corporation

Nov 2017 - Oct 2021

- Developed In-house EFT/Payment simulator and integrated to Jenkins CI/CD pipelines which helped Testing teams to overcome issues with Live remote payment systems for Debugging and reduced the usage of hardware (Pin-Pad, EFT-Gateway server) by 40%
- Managed and scaled Kubernetes clusters supporting (15+) microservices and processing over (1M) daily requests.

Artifactory & Vault:

JFrog, HashiCorp Vault

Certifications

AWS Solution Architect Associate

GitLab CI/CD - Udemy

DevSecOps using GitLab - Udemy

EDUCATION:

Computer Science Engineering

- Developed automated deployment and rollback scripts using Python and Bash, eliminating (50%) of manual operational workloads.
- Managed basic Kubernetes workloads on EKS Cluster, during application migration from monolith to microservices, Bugfixes, Code Review & Enhancements for POS systems for Meijer's(US) and Coles (AUS)

SDE - I @ Strada Global

Jan 2015 - Nov 2017

- SPOC for UK & India teams to create Cross-Platform builds and Release Management using Jenkins, Flexera-Install Anywhere tools
- Implementation of Cross-Platform PROIV-Performance Monitor(PPM) library using C, C++, Data Structures, Multi- Threading, Restful Webservices using Windows and Linux OS
- Refactored a tightly coupled Cross-Platform Tracing/Logging code into a single & reusable library and Developed Cross-Platform Shared Library for PROIV product to support MySQL database

Research Engineer @ DRDO (Govt. of India)

Oct 2014 - Dec 2015

- Designed and Implemented Distributed Multicast Gateway Server using C++, Linux, Multithreading, STL, QT-Creator from scratch using Linux OS
- Designed & Implemented a Real-Time Radar Data Simulator application
